- Learn Fundamentals Data Science and cyber security.
- Worked with Figma designing and implementing using Html, CSS & Vanila JS
- Gained knowledge of deploying website using web hosting and domain management

PROJECTS

Car dealership Application - 3rd Semester

I was able to develop auto dealership applications using Java and Android Studio that could manage cars and provide information on their status, pricing, locations, models, etc.

Portfolio Website - 3rd Semester

Using the MEAN Full-Stack Framework, I developed a portfolio website where I displayed some of my projects and provided additional personal details.

Todofy (Flutter) - Side project

I was interested in learning Flutter, and my main goal was to use it to make a to-do android application. To construct Android applications, I utilized a database and the CRUD approach.

E-drummer - Side project

I used JavaScript to build this website where keyboard buttons can be used to play the drums. To improve the user experience, I have included additional tools to control the volume and mute.
